u-remote fieldbus coupler for CC-Link IE TSN networks

UR20-FBC-CC-TSN

u-remote fieldbus couplers are well proven for setting up demand-oriented fieldbus architectures and adapting them to individual requirements. The couplers detect system states via sensors, send the data to higher-level controllers, and transmit output signals to the actuators.

With the u-remote CC-Link IE TSN couplers, decentralized I/O systems can be connected to control systems via powerful CC-Link IE TSN networks. The devices are compatible with all u-remote I/O modules and offer the typical advantages of all u-remote couplers. These include convenient handling, uncomplicated installation, comprehensive diagnostic functions, and the integrated web server.

URL : <https://www.weidmueller.com/int/>

Connection of up to 64 modules with one system supply

Integrated web server for system diagnostics even before connection to the controller

Separate I/O current paths for input and output modules (2 x 10A at 24 V DC)
